Software Quality Assurance (SQA) – 3-Week Project Task

Project Title: Automation Testing and Final Reporting
Submission Deadline: 3rd April, 2026

Objective:

To understand the basics of automation testing and API testing, and compile the final project report.

Learning Focus:

- Introduction to Selenium or Postman
- Automation Script Development
- API Testing Concepts
- Final QA Project Documentation

Automation Script Development

Logintest.js

```
import { Builder, By, until } from "selenium-webdriver";
import chrome from "selenium-webdriver/chrome.js";
import chalk from "chalk";

const log = chalk.green;

async function loginTest() {
  let driver = await new Builder()
    .forBrowser("chrome")
```

```
  .setChromeOptions(new chrome.Options().addArguments("--remote-allow-origins=*"))
  .build();

try {
  console.log(log("Opening SauceDemo..."));
  await driver.get("https://www.saucedemo.com/");

  let username = await driver.wait(until.elementLocated(By.id("user-name")), 10000);
  let password = await driver.findElement(By.id("password"));
  let loginBtn = await driver.findElement(By.id("login-button"));

  // ---------- Test Case 1: Empty Login ----------
  console.log(log("Test Case 1: Empty Login"));
  await username.sendKeys("");
  await password.sendKeys("");
  await loginBtn.click();

  // Wait for error message
  try {
    let error = await driver.wait(until.elementLocated(By.css("h3[data-test='error']")), 5000);
    console.log(log("Test Case 1: PASS (Error message shown)"));
  } catch {
    console.log(chalk.red("Test Case 1: FAIL (No error message)"));
  }

  await username.clear();
  await password.clear();

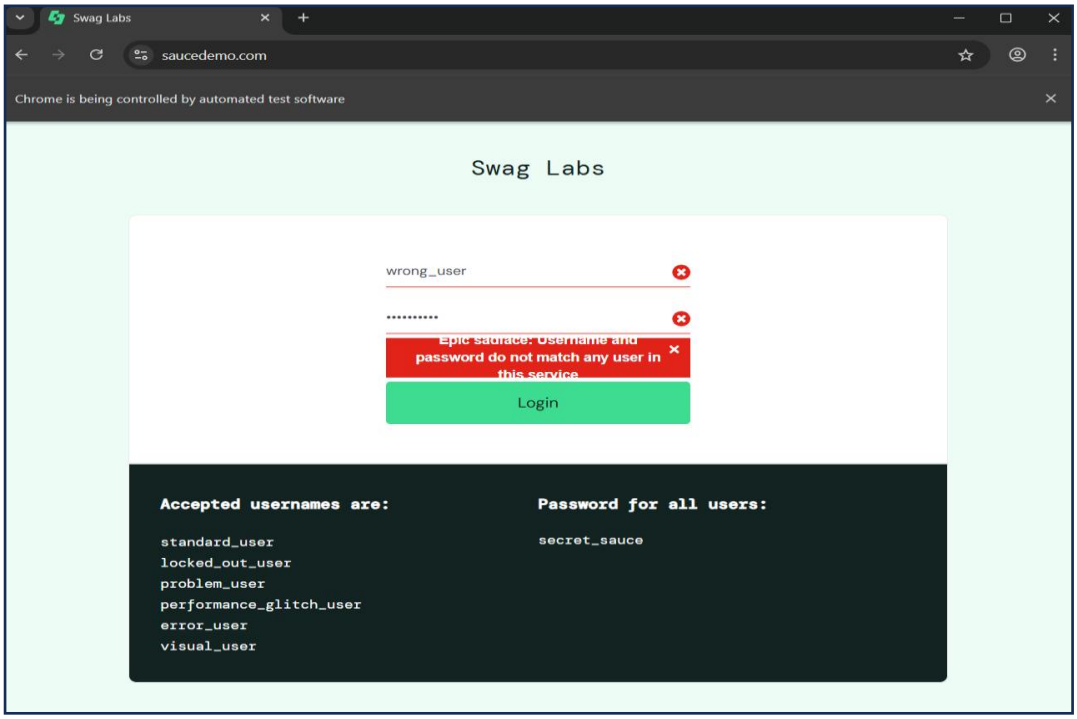
  // ---------- Test Case 2: Invalid Login ----------
  console.log(log("Test Case 2: Invalid Login"));
  await username.sendKeys("wrong_user");
  await password.sendKeys("wrong_pass");
  await loginBtn.click();
```

```
    try {
      let error = await driver.wait(until.elementLocated(By.css("h3[data-test='error']")), 5000);
      console.log(log("Test Case 2: PASS (Error message shown)"));
    } catch {
      console.log(chalk.red("Test Case 2: FAIL (No error message)"));
    }

  } catch (e) {
    console.log("Error:", e);
  } finally {
    console.log(log("Closing browser..."));

  }
}

loginTest();
```



Dashboard.test

```
import { Builder, By, until } from "selenium-webdriver";
import chrome from "selenium-webdriver/chrome.js";
import chalk from "chalk";

const log = chalk.blue;

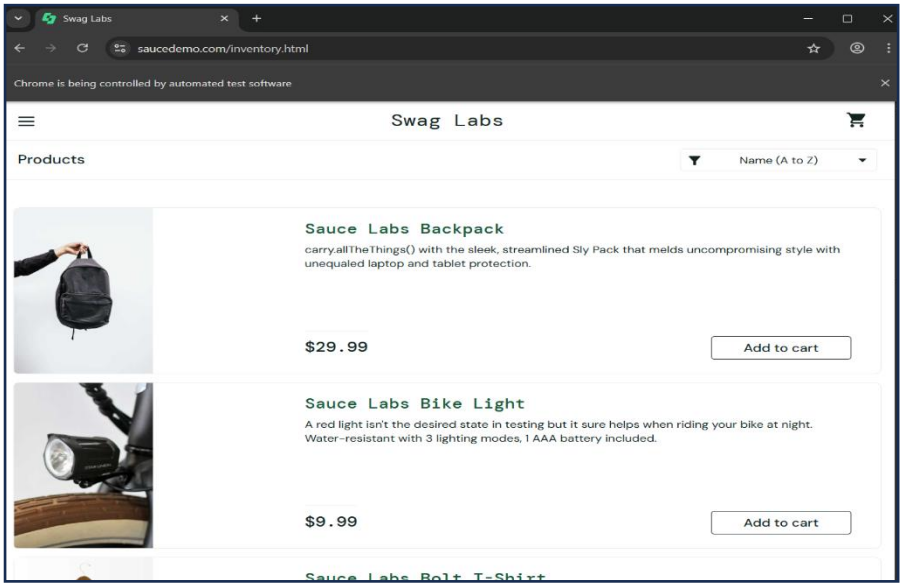
async function dashboardTest() {
  let driver = await new Builder()
    .forBrowser("chrome")
    .setChromeOptions(new chrome.Options().addArguments("--remote-allow-origins=*"))
    .build();

  try {
    console.log(log("Opening SauceDemo...")); 
    await driver.get("https://www.saucedemo.com/");

    let username = await driver.wait(until.elementLocated(By.id("user-name")), 10000);
    let password = await driver.findElement(By.id("password"));
    let loginBtn = await driver.findElement(By.id("login-button"));

    // Valid login
    await username.sendKeys("standard_user");
    await password.sendKeys("secret_sauce");
    await loginBtn.click();

    // Wait for dashboard
    await driver.wait(until.elementLocated(By.className("inventory_list")), 10000);
    console.log(log("Dashboard Test: PASS"));

  } catch (e) {
    console.log("Error:", e);
  } finally {
```


```
    console.log(log("Closing browser..."));

  }
}

dashboardTest();
```
